

The XP3 audio guide device

Product description

The XP3 is an *all-in-one* platform that gives you unprecedented understanding and control of your visitor experience. For over 30 years, we've been defining best-in-class audio experiences with the world's leading institutions.

Intuitive to use, and easy to maintain, the XP3 now comes equipped with a vivid, high-resolution colour screen that supports images, text, multiple languages, and a dedicated high-definition audio chip.

The XP3 is slimmer, lighter and better sounding than any previous audio guide; it combines the quality and support you've come to expect with the next level of versatility, accessibility, and innovation.

The new XP3 audio player builds on decades of expertise and again reimagines the tour experience through a highly evolved, insight-based approach. The audio player's design reflects your preferences and requirements:

High-definition audio

A dedicated high-definition digital audio chip, similar to those found in high-end smartphones and home audio systems, will provide your visitors with a super-clear, rich, immersive audio experience, time after time.

Elegant design

With its lightweight construction and slim, elegant design; the XP3 can be held and operated with one hand, providing your visitors with devices that are easy to use and as universally accessible as possible.

Broad accessibility

XP3's digital sound can be directed to a universal 3.5mm headphone jack or to a built-in speaker, which gives your visitors the choice to use headphones or to hold the device to their ear in 'mobile phone' mode. For visitors with impaired hearing, the universal headphone jack is induction loop compatible.

Premium display

The XP3 comes with a 2.4" LCD flat-panel display screen that uses high resolution TFT technology to provide total clarity.

Jumbo memory

The XP3 comes with 8Gb of SD memory as standard, expandable to 32Gb. Having enough space for multiple languages is never a concern when using the XP3.

Supports creativity

Whatever your visitors are looking for: random-access experiences or linear structures, the XP3 supports your creative approach.

Mass repeat use

The XP3 is built from high-tensile, virtually unbreakable, plastic to withstand the toughest on-site conditions.

Battery Life

With a 2000 mA/h Lithium Polymer internal battery pack, the XP3 provides 12+ hours of audio playback for continual reuse throughout the day before needing to recharge.

Peace of mind

The XP3 is fully CE & FCC certified and is manufactured under RoHS-compliant conditions. Compliance with these necessary health and safety standards provides you with complete peace of mind.
